"Quality You Can Sense"

Thermometrics Corporation has been a manufacturer of Thermocouples, RTD’s and related accessories since 1965. Our company staff includes over 220 years of collective experience and is eager to meet any of our customer’s challenges or requests. We are committed to providing outstanding service, competitive pricing and excellent lead times. We are quality audited to ISO-9001-2008 and have an excellent reputation both domestically and globally.

**PRODUCTS AND SERVICES AVAILABLE**

- Thermocouple and RTD Sensors
- Bearing Sensors
- Tube Skin Thermocouples
- Feed Thru’s
- Thermocouple Wire & Cable
- RTD Leadwire
- Waterproof Connectors
- Replacement Elements
- Thermistor Probes Multipoint Thermocouple and RTD Probes
- Bimetal Dial Thermometers
- Precision Wire Wound Resistors
- Thermowells and Protection Tubes
- Custom Mounting Fittings

*Calibration Services Include: Thermocouples, RTDs, Temperature Transmitters, Controllers and Indicators*

**INDUSTRIES SERVED**

- Oil, Gas & Petrochemical
- Pharmaceutical
- Paper & Pulp
- Mining
- Utilities
- Marine
- Waste Water
- Compost
- Military
- Dairy
- Power Generation
- Refrigeration
Assemblies offer a wide variety of configurations and termination styles to meet various applications.

**Material**

- 304 Stainless Steel
- 310 Stainless Steel
- 316 Stainless Steel
- INC. Alloy 600

*SPECIAL MATERIAL AVAILABLE

**Diameter**

- 0.010" (single TC)
- 0.020" (single TC)
- 0.032" (TC only)
- 0.040" (TC only)
- 0.063"
- 0.125"
- 0.188"
- 0.250"
- 0.313"
- 0.375"
- 0.500"

**Construction**

- S = Single Thermocouple
- D = Dual Thermocouple
- S2 = Single 2 wire RTD
- S3 = Single 3 wire RTD
- S4 = Single 4 wire RTD
- D2 = Dual 2 wire RTD
- D3 = Dual 3 wire RTD
- D4 = Dual 4 wire RTD
- MP = Multi-Point

**Sensor**

- B
- C
- E
- J
- K
- N
- R
- S
- T
- 10A - 10Ω copper @ 0°C
- 10B - 10Ω copper @ 25°C
- 100 - 100Ω platinum @ 0°C
- 120 - 10Ω nickel @ 0°C
- 500-500Ω platinum @ 0°C
- 1000-1000Ω platinum @ 0°C
- TH - Thermistor

**Junction/Alpha**

- G
- GWP
- GPT
- U
- UWP
- UPT
- E
- 385 PLT
- 390 PLT
- 392 PLT
- 421 CU
- 673 Ni

**Other Available Materials**

- 316L - ALUMINUM
- 347 - TANTALUM
- 446 - MOLE 400
- INC-625 - MOLYBDENUM
- COPPER - HASTELLOY B-2
- TITANIUM - HASTELLOY C-276

**Material Notes**

- **304 S.S.** - Most commonly used low temperature sheath material. Good corrosion resistance. Subject to damaging carbide precipitation in the 900°F to 1600°F range. Max Temp. 1650°F
- **310 S.S.** - Mechanical and corrosion resistance similar to but better than 304 S.S. Very good heat resistance. This alloy contains 25% Cr, 20% Ni. Not as ductile as 304 S.S. Max Temp 2100°F
- **316 S.S.** - Best corrosion resistance of the austenitic stainless steel grades. Good corrosion resistance in Hydrogen Sulfide. Subject to damaging carbide precipitation in the 900°F to 1600°F range. Max Temp. 1650°F

**Junction**

- G = Grounded
- U = Ungrounded
- E = Exposed
- PT = Pointed Tip
- WP = Welded Pad

**Grounded Junction** - The sheath and conductors are welded together forming a sealed integral junction. Recommended in Liquids, Gas, Moisture, or High Pressure. Response time approaches that of an exposed junction.

**Ungrounded Junction** - Junction is fully insulated from welded sheath end. Electrically isolates junction from outer sheath. Response time is slightly longer than grounded junction.

**Exposed Junction** - Thermocouple conductors are butt welded. Insulation is sealed for moisture protection. This design provides the fastest response time but leaves the junction unprotected from corrosive or mechanical damage.

**Pointed Tip** - Is available for piercing probe applications.

**Weld Pad** - 300 series stainless steel 1” x 1” x 1/8” is available in grounded (GWP) and ungrounded (UWP) configurations. Weld pad can be parallel, perpendicular or curved per your specification.
Lead Styles:

- **L1** = Wires Exposed
- **L2** = PVC Insulated Lead Wire. Rated 105°C, Epoxy Potted
- **L3** = Teflon Insulated Lead Wire. Rated 204°C, Epoxy Potted
- **L4** = Fiberglass Insulated Lead Wire.Rated 204°C, Epoxy Potted
- **L5** = Fiberglass Insulated Lead Wire. Rated 510°C, Ceramic Cement

Coverings:

- **SS** = Stainless Steel Overbraid
- **FA** = Tinned Copper Overbraid
- **TFA** = Stainless Steel Flex Armor
- **PFA** = Teflon Coated Stainless Steel Flex Armor
- **0** = None

Terminations:

- **P** = Male Plug *(MP = Mini Plug)*
- **J** = Female Jack *(MJ = Mini Jack)*
- **ASCH** = Aluminum Screw Cover Head
- **SCH** = Stainless Steel Screw Cover Head
- **PH** = Plastic Screw Cover Head
- **MPH** = Mini Plastic Screw Cover Head
- **MAH** = Mini Aluminum Screw Cover Head
- **EXH** = Explosion Proof Head (USL, CSA)
- **HCH** = Hinged Cover Head
- **HPH** = High Profile Hinged Cover Head
- **SL** = Spade Lugs (#10 Screw Size)
- **BW** = Bare Wire

Fittings:

- 1/8”
- 1/4”
- 3/8”
- 1/2”
- 3/4”
- 1”
- 1/8” x 1/8”
- 1/4” x 1/4”
- 3/8” x 3/8”
- 1/2” x 1/2”
- 3/4” x 3/4”
- 1” x 1”

*Add length to armor code. Example: “PFA24”

For transition housing, add “T” to the order code. Ex. “TL2”.

For spring strain relief spring, add “S” to the order code. Ex. “TL2S”.

*Tip to first fixed obstruction*
Two-Wire:
Provides one connection to each end of the element. This construction is suitable where the resistance of the lead wire may be considered as an additive constant in the circuit, and particularly where the changes in lead resistance due to ambient temperature changes may be ignored.

Three-Wire:
Provides one connection to one end of the element and two to the other end of the element. Connected to an instrument designed to accept three-wire input, sufficient compensation is usually achieved for leadwire resistance and temperature change in leadwire resistance. This is the most commonly used configuration.

Four-Wire:
Provides two connections to each end of the element to completely compensate for leadwire resistance and temperature change in lead wire resistance. This configuration is used where highly accurate temperature measurement is vital.

[Graph showing RTD tolerance curves for different classes and temperatures.]
RTDs are temperature sensors that contain a sensing element whose resistance changes with temperature. These sensors are often placed so they can be in a position in the process where it can reach the same temperature. Platinum wire or film RTDs are the most common type in use today. Platinum RTDs are used to measure temperatures from \(-400^\circ F\) to \(1550^\circ F\). Due to higher accuracy and repeatability RTDs are slowly replacing the use of thermocouples in many industrial applications below \(1200^\circ F\).

Resistance Temperature Detectors also known as RTDs, accurately sense temperature with an excellent degree of repeatability and interchangeability of elements. RTD stands for Resistance Temperature Detector. RTDs are sometimes referred to generally as resistance thermometers. The RTD is composed of certain metallic elements whose change in resistance is a function of temperature. In operation, a small excitation current is passed across the element, and the voltage, which is proportional to resistance, is then measured and converted to units of temperature. The RTD element is manufactured by winding a wire (wire wound elements) or plating a film (thin film elements) on a ceramic or glass core and sealing the element within a ceramic or glass capsule.
Thermocouples are the most common, convenient, and versatile devices used to measure temperature. They convert units of heat into useable engineering units that serve as input signals for process controllers and recorders. Through selection of appropriate thermocouple wires and sheath components, thermocouples are suitable to be used in temperature ranges from (-200 to 2316)°C [-328 to 4200]°F.

Thermometrics thermocouple assemblies offer a wide variety of termination styles and mounting fittings, as well as extensive choices in sensor calibration, sheath diameter and sheath material. This section outlines the key choices needed to specify the correct Thermometrics part description for your needs. In each case, you will be asked to select the:

- Material
- Diameter
- Single or Dual
- Calibration
- Junction
- Immersion
- Lead Wire
- Wire Length
- Protective Covering
- Termination
- Fitting
- Special

---

**SPECIAL**: CONFIGURATION, DETAIL, CONCEPT, COMPONENTS ETC...

- **THREADED ADAPTERS**: HEX FITTINGS, COMPRESSION FITTINGS, FLUID SEALS ETC...
- **TERMINATION**: BARE WIRE, PLUG, JACK, RING LUGS, TERMINALS ETC...
- **CABLE PROTECTION**: SS OVERBRAID, FLEX ARMOR, RUBBER SLEEVE ETC...
- **CABLE LENGTH**: ANY LENGTH IN INCHES
- **CABLE INSULATION**: PVC, TFEFLON, FIBERGLASS, KAPTON ETC...
- **PROBE LENGTH**: ANY LENGTH IN INCHES
- **JUNCTION STYLE**: TC: GROUNDED, UNGROUNDED, EXPOSED, ETC... RTD: ALPHA
- **CONFIG**: TC: SINGLE, DUAL, MULTIPoint ETC... RTD: S2, 3 OR 4, D2, 3 or 4 (Single or Dual)
- **SENSOR TYPE**: TCS: J, K, T, E, R, S, ETC... RTD'S: 1000Ohm, 5000Ohm, 10000Ohm, 120Ni...
- **PROBE DIAMETER**: .063, .125, .188, 250, .375 ETC... (SINGLE TCS: .010, .020, .040)
- **SHEATH MATERIAL**: 304SS, 316SS, INCONEL, HASTELLOY ETC...
**Selecting Your Thermocouple**

The primary factor in selecting a thermocouple for a given application is the temperature range it will be exposed to, the table below offers a quick reference for this purpose. Other important factors to consider are the expected lifespan of the element and the process conditions present during the operation. Listed below, are the most commonly used thermocouple calibration and their temperature limits.

Avoid costly plant shut downs with our express bearing sensor manufacturing service. We stock an inventory of components to manufacture bearing sensors for high and moderate temperature services. Top hat, small profile bearing cap, and double oil seal configurations are routinely assembled with Nickel 120 ohm, Pt 100 ohm and thermocouples.

With over 45 years experience and a manufacturing facility on the West Coast, the days of waiting a week or two for delivery of critically needed embedded bearing sensors is over! We currently stock many common bearing sensor configurations and have the ability to stock customer specific bearing sensors.

Convert RTD and Thermocouple inputs to analog signals for direct interface with indicators, recorders, controllers, PLC, DCS and PC-based SCADA systems.

Flex Armor Cable
Provides flexible wire protection.

Plugs & Jacks
Temperature ratings for plugs and jacks are continuous use. The plugs and jacks come in standard and miniature sizes.

Ceramic Protection Tubes
Used in applications where contamination from hostile environments or the cutting action of concentrated and direct flame impingement are factors.

MgO or Magnesium Oxide Cable
Providing a simple solution to many difficult wiring problems and makes for a dependable and permanent installation for virtually all types of electrical circuits.

Thermowells and Flanges
Thermowells are used to provide an isolation between a temperature sensor and the environment, either liquid, gas or slurry.
**Accessories**

**Fittings**
Quality Stainless Steel temperature sensor fittings for any application. Thermometrics can create any custom design temperature with any fitting of your choice.

**Elements**
Temperature sensing component at the heart of an RTD or resistance thermometer.

**Connection Heads**
Thermometrics offers a multitude of sensor accessories including connection heads and explosion proof heads.

**Wireless Systems**
The ability to add remote sensing points, without the cost of running wires, results in numerous benefits including energy and material savings, process improvements, labor savings, and productivity increases.

**RTD Wire**
2, 3, 4 wire nickel or tin plated copper conductor constructions in a variety of gauge sizes.

**Thermocouple Wire**
Matched pairs with duplex insulation color coded. Wide variety of calibration types and insulation materials available.
Thermometrics calibration laboratory provides temperature calibrations from approximately –100°C to +1200°C comparison methods. Our prices are very competitive and our turn-around times are excellent. Our reports are comprehensive and include pass/fail criteria (where applicable) and a concise statement of the method used. Calibrations are performed in accordance with ANSI Z540 and MIL-STD 45662 and are traceable to N.I.S.T. industrial specifications such as AMS, ASTM, DIN, IEC, and JIS are common knowledge among our calibration staff.

For comparison calibrations, we use Hart baths, Hart SPRTs, and Hart readouts. We use several different techniques to minimize uncertainties while maximizing efficiency to keep the costs as low as possible without compromising quality. We are the laboratory of choice for many of our customers because they know that they can depend on us for correct, complete, and on-time calibrations at reasonable prices.
Application Assistance

Our sales engineers and cross trained and able to attend to all of our customer's special needs and requirements. By doing so, this means you'll speak with the same Sales Engineer every time and consequently, you can depend on getting sales assistance based on your needs. Our sales team, all with hands-on, in-house production experience and field application knowledge, can provide you with information about our products and their process applications, as well as help you select a standard or special product to solve your specific problem. They are your partners and your first link to the successful application and use of our products.
